Database

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Delta-4 protein - human
C;Species: Homo sapiens (man)
C;Species: Homo sapiens (man)
C;Species: Homo sapiens (man)
C;Accession: JC7570
R;Yoneya, T.; Tahara, T.; Nagao, K.; Yamada, Y.; Yamamoto, T.; Osawa, M.; Miyatani, S.; P. J. Blochen. 129, 27-34, 2001
A;Title: Molecular cloning of Delta-4, a new mouse and human notch ligand.
A;Title: Molecular cloning of Delta-4, a new mouse and human notch ligand.
A;Title: Molecular cloning of Delta-4, a new mouse and human notch ligand.
A;Reference number: JC7569; MUID: 21064937; PMID:11134954
A;Recession: JC7570
A;Molecule type: mRNA
A;Residues: 1-685 < YON>
A;Cross-references: UNIPROT:O9NR61; DDBJ;AB043894
C;Cross-references: UNIPROT:O9NR61; DDBJ;AB043894
C;Coment: This protein, the growth or differentiation of vascular endothelial cells.
C;Genetics:

A31246
metagenic protein Delta precursor - fruit fly (Drosophila melanogaster)
c)species: Drosophila melanogaster
C;Date: 31-Mar-1990 #sequence_revision 31-Mar-1990 #text_change 02-Aug-2002
C;Accession: A31246
C;Accession: A31246
A;Title: Delta, a Drosophila neurogenic gene, is transcriptionally complex and encodes A;Accession: A31246
A;Molecule type: mRNA
A;Residues: 1-832 <KOP>
A;Residues: 1-832 <KOP>
C;Genetics:
A;Gene: FlyBase:Dl

S00670

Bourcogenic repetitive locus delta protein precursor - fruit fly (Drosophila melanogaster)

NyAlternate names: gene Dl protein
CiSpeciae: Drosophila melanogaster
CiDate: 31-Dec-1988 #sequence_revision 31-Dec-1988 #text_change 09-Jul-2004
CiAccession: S00670; A26637
CiAccession: S00670; A26637

RyVaessin, H.; Bremer, K.A.; Knust, B.; Campos-Ortega, J.A.

Mus musculus (Mouse).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: May be involved in cell-to-cell communication in mammalian embryos. May have a role in cellular interactions underlying somitogenesis and development of the nervous system. SUBUNIT: Interacts with Notch receptors.
SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: In the embryo, expressed in the paraxial mesoderm and nervous system. Expressed at high levels in adult
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Exp. Med. 194:991-1001 (2001).
FUNCTION: Acts as a ligand for Notch receptors. Blocks the differentiation of progenitor cells into the B-cell lineage while promoting the emergence of a population of cells with the characteristics of a T-cell precursor.
SUBUNIT: Interacts with Notch receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDLINE=21464863; PubMed=11581320;

SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: Expressed in heart and pancreas, with lower expression in brain and muscle and almost no expression in placenta, lung, liver, and kidney.
SIMILARITY: Contains 1 DSL domain.
SIMILARITY: Contains 8 EGF-like domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Delta-like protein 1.
